

VGo Loaner Robots

September 2016

Available at no fee to netVision20 Members!!!

Five (5) VGo robots will be available on loan to netVision20 members. Currently there are several students that are not always able to be physically present in the classroom. Not only are districts losing dollars when students are not in class, the student is falling behind academically and feeling left out socially.

What is a VGo?

VGo is a new robot technology solution that will allow students to participate in class while allowing districts to count the student as present. The VGo replicates a person in a distant location allowing them to see, hear, talk and move around as if they were there. It has usage for special education, 504 and other special circumstances. Some of the special circumstances include injuries, chronic illnesses for extended periods of time, immune deficiencies and other health conditions and physical challenges that prevent a student from physically being able to attend school.

How do I get a VGo for my homebound student?

Districts/charter schools must provide approval indicating the homebound status has been verified and approved for the timeframes of checkout. Sign a memorandum of understanding and complete the VGo request form.

Can I get a VGo if I am not a netVision20 member?

You will be able to rent the unit for \$600 per thirty (30) days based on availability if you are not a netVision20 member.

VGo Robot Names

Clank
Kitt
Ratchet
Rosie
Sparky
