

# **TEKS Update-Year At A Glance AIS-Instructional Services Zaragoza**

[MUSIC PLAYING]

Welcome to the TEKS Resource System Year at a Glance video. I've already logged in, and I'm going to come over to my Quick Search box, and I'm going to choose Grade 5, Mathematics, and hit Search. In doing so, we will bring up all of the components that make up the curriculum. And I'm going to scroll past and go down to the third component, which is your Year at a Glance. And you can see that your Year at a Glance are both by six weeks and by nine weeks.

I'm going to choose to look at the Year at a Glance from a six weeks perspective. And this document tells you for each of the six or the nine weeks which units you will be instructing. If you highlight and go over the unit itself, and you click on it, it'll take you to that Instructional Focus Document, as this. At the end of the unit, it tells you how many instructional days you'll need to teach, so the cognitive and content expectation of that unit.

So unit one is 13 days. And then if you hover over any of the student expectations, it'll give you that narrative for each of those student expectations. These student expectations are not bundled in any way other than to be in numerical order. And these are all of the standards that are making up each of those units of instruction.

Another thing you can notate is that unit one and unit two are a total of 25 days-- 13 plus 12 is 25. Therefore, the TEKS Resource System doesn't take out every single day within a grading period. These days represent true instructional days needed to teach to mastery the contents of the standards that are making up that unit. Thank you for watching the TEKS Resource System Year at a Glance video.
